3.19 Setting the Smart Sleep Mode – A73

SMS Sending	0000,A73,*Sleep level*
SMS Reply	IMEI,A73,OK
Description	Set the automatic smart sleep mode when the tracker is idle. When the sleep level is **0**, the sleep mode is disabled (default). When the sleep level is **1**, the tracker enters the normal sleep mode. The GSM module always works, and the GPS module occasionally enters the sleep mode. The tracker works 25% longer in the normal sleep mode than that in the normal working mode. This mode is not recommended for short interval tracking; this will affect the route precision. When the sleep level is **2**, the tracker enters deep sleep mode. If no event is triggered after five minutes, the GPS module will stop and the GSM module will enter sleep mode. Once an event is triggered, the GPS and GSM modules will be woken up. A heartbeat event will be triggered only in the deep sleep mode, which will be uploaded

every one hour by default.

Triggering events include: SOS alarm, low internal/external battery, external power status, GPS antenna cutoff alarm, towing alarm, high temperature, low temperature, fuel stealing, vehicle stealing, ACC ON, (button) changes on any input port, vibration, incoming call, SMS receiving, call, and heartbeat event (The GPS is disabled during heartbeat wakeup.).

Note:

● T355 is in deep sleep mode by default. If no event (drop/incoming call/SMS/vibration) is triggered after five minutes, the tracker will enter deep sleep mode. In this way, a triggering event (drop/incoming call/SMS/vibration) can wake the device up, and then the device will enter working mode. In deep sleep mode, if no event (drop/incoming call/SMS/vibration) is triggered within 25 minutes, the device will automatically enter super power-saving mode. In this mode, only a drop or vibration event can wake the device up. GPS and GSM modules can be enabled intelligently based on vehicle driving status, which saves power.

● The MT90 can enter sleep mode under vibration, and vibration cannot wake the MT90 up from sleep mode. If the A19 command is enabled, the MT90 can be woken up. By default, MT90 cannot be woken up by vibration.

● After the T322X stops working for 15 minutes, it automatically enters the power-saving sleep mode. In this way, the GPS module does not work, and the T322X does not upload tracking data at a regular interval. Instead, the T322X sends heartbeat data packets about the positioning cease (GPS invalid) to the platform every 60 minutes. The interval for sending heartbeat packets can be changed. If the T322X vibrates, the T322X will be woken up, continue to work normally, and report data including heartbeat packets at a regular interval.

● In any condition, you can use an SMS or a GPRS command to disable the sleep mode, and then the tracker exits the sleep mode and returns back to the normal working mode.

SMS Sending	0000,B21,*Status*
SMS Reply	IMEI,B21,OK

Description	When the activation status is **1** (default value), the anti-theft function is enabled. An alarm is generated when the first negative input and first positive input of vehicle trackers excluding SOS are activated. For example, an alarm is generated when input 3 or 4 of the MVT800 is activated or input 2 or 3 of the T322X is activated.
	When the activation status is **0**, the anti-theft function is disabled. No alarm is generated when the first negative input and first positive input of vehicle trackers excluding SOS are activated. Recorded data can only be read by GPSLog or Meitrack Manager software.
	Note: The function is only available for MVT series, T1, and T322X vehicle trackers. The following lists inputs of trackers:
	<table><tr><th>Tracker</th><th>Negative Input (Vehicle Door)</th><th>Positive Input (ACC)</th></tr><tr><td>MVT100</td><td>-</td><td>Input 2</td></tr><tr><td>MVT340</td><td>-</td><td>Input 2</td></tr><tr><td>MVT380</td><td>Input 2</td><td>Input 4</td></tr><tr><td>MVT600</td><td>Input 2</td><td>Input 3</td></tr><tr><td>T1/T333/T3</td><td>Input 2</td><td>Input 3</td></tr><tr><td>MVT800</td><td>Input 3</td><td>Input 4</td></tr><tr><td>T322X</td><td>Input 3</td><td>Input 2</td></tr></table>
	Note: When the T322X/MVT800 is in arming state and input 3 is triggered, a vehicle stealing alarm will be generated, the buzzer makes a sound, and the tracker makes a call and sends an SMS to the authorized phone number. In this way, if T322X input 2/MVT800 input 4 is triggered, output 1 is activated and the tracker makes a call and sends an SMS to the authorized phone number.
